Professional Summary

Full Stack Engineer with experience building scalable web applications and RESTful backend systems using Spring Boot, Node.js, React.js, MongoDB, and MySQL. Experienced in authentication and authorization systems using JWT and OAuth 2.0, API integration, modular backend architecture, and stakeholder-driven feature development in startup environments. Strong understanding of OOP, data structures, database design, and scalable service-oriented application development.

Technical Skills

- **Languages:** Java, JavaScript (ES6+), SQL, Python
- **Backend:** Spring Boot, Node.js, Express.js, REST API Development
- **Frontend:** React.js, Tailwind CSS, HTML5, CSS3
- **Databases:** MongoDB, MySQL
- **Authentication:** JWT Authentication, OAuth 2.0, Role-Based Access Control
- **Concepts:** OOP, Data Structures & Algorithms, System Design Basics, Microservices Fundamentals
- **Tools:** Git, GitHub, Linux, Postman, VS Code
- **Soft Skills:** Stakeholder Management, Agile Collaboration, Product Ownership, Problem Solving

Experience

- **Software Engineer – Backend (Spring Boot)** Feb 2026 – Present
  FinMkt, India
  - Built scalable backend services for financial workflow and data processing systems using Spring Boot.
  - Developed REST APIs with layered architecture, request validation, centralized exception handling, and reusable service modules.
  - Designed MongoDB data models and optimized database interaction workflows for structured financial datasets.
  - Collaborated with frontend teams and stakeholders to define API contracts and improve workflow reliability.
  - Participated in debugging production issues, feature delivery cycles, and backend performance optimization.
- **Software Engineer Intern – Frontend (React.js)** May 2025 – Feb 2026
  FundRaksha LegalTech Pvt Ltd, Hyderabad
  - Collaborated directly with founders and stakeholders to build scalable B2B legal-tech workflow solutions.
  - Developed production-grade React.js dashboards and reusable UI component systems.
  - Integrated REST APIs and optimized frontend rendering for dynamic datasets and workflow-driven applications.
  - Worked closely with backend teams for seamless frontend-backend integration and iterative feature delivery.

Projects

- **Dynamic Workflow Processing Engine** GitHub: https://github.com/SriramAalapati/dataprocessor
  - Built a modular backend processing engine for dynamic query and command execution workflows.
  - Developed reusable database abstraction layers and configurable REST APIs with centralized exception handling.
  - Implemented scalable request-routing architecture following microservice-oriented design principles.
  - **Tech Stack:** Spring Boot, MongoDB, Java, REST APIs
- **AI Healthcare Assistant** GitHub: github.com/SriramAalapati/Healthcare-chatbot
  - Built a conversational healthcare assistant interface with real-time Gemini API integration.
  - Developed reusable frontend architecture with asynchronous API handling and responsive UI design.
  - **Tech Stack:** React.js, Tailwind CSS, Gemini API

CERTIFICATIONS

- MongoDB Python Developer Path – MongoDB University
- Full-Stack Web Developer Certification – LinkedIn Learning
- Oracle Java Foundations – LinkedIn Learning
- Learning SQL Programming – LinkedIn Learning
- Scrum Fundamentals Certified (SFC™) – SCRUMstudy

EDUCATION

B.Tech – Computer Science and Engineering 2022 – 2026
Sasi Institute of Technology and Engineering
CGPA: 8.5
